

Formula 1 Forecast: Build Your Grid

Milestone #: 1

Date: 3 Feb, 2026

Group Number: 61

Name	Student Number	CS Alias (Userid)	Preferred E-mail Address
Ben Faraone	66092446	bfaraone	bfaraone920@gmail.com
Evelyne Kosgei	95129847	ekosgei	evelynekosge99@gmail.com

By typing our names and student numbers in the above table, we certify that the work in the attached assignment was performed solely by those whose names and student IDs are included above.

In addition, we indicate that we are fully aware of the rules and consequences of plagiarism, as set forth by the Department of Computer Science and the University of British Columbia

What is the domain of the application? Describe it.

The domain of our project is in Sports, Fan Engagement and Community Building. Implementing a Formula 1 prediction platform providing Users with the chance to predict outcomes of race weekends throughout the formula 1 season, earning points based on accuracy. Additionally, the application will allow multiple users to compete together by comparing their scores.

What aspects of the domain are modeled by the database? In answering this question, you will want to talk about what your project is trying to address and how it fits within the domain. It is likely that in the process of answering these questions you will bring up examples of a real-life situation that the application could be applied to.

With a focus on the sports of Formula 1, our database aims to link user predictions to real drivers and session results. Aimed to increase user engagement, we will model the user-to-session dynamic that occurs when taking predictions on categories specific to Formula 1 such as podium finishes, and some fan favorites such as driver of the day. Through predictions, users will provide the data that will interact with our local database for session results and information through which points can be awarded based on the accuracy of the prediction. The data model will also provide users with the options to add friends (other users) which enables them to form wider communities with people having similar interests. Users can compare their results to their friends.

With the consent of the users, the data from our database could be used to analyse fan engagement, trends and preferences providing insights into popular drivers, teams, and types of interactions within the Formula 1 sports community.

An explicit acknowledgment about your use of AI tools in this assignment. Specifically, We are looking for a clear yes/no about whether you have used one or more AI tools. If yes, we want to know which tool(s) you have used and we want a PDF of the full Conversation.

No generative AI was used in this proposal.
